While educators and educational psychologists debate the influence of media on learning, there can be little doubt that media is now an integral constituent of any educational context. In particular, computer and internet media, with their immense processing power and multimedia capabilities, can have significant bearing on learning processes and outcomes in today's learning environment. Such media, which are increasingly designed to be highly interactive and adaptable, can enable reflective, productive and communicative activities and have much potential for foreign language learning. The book contains 16 papers which look at different forms of media and explore how these affect or can be used effectively in foreign language education. The first of three parts focuses on important theoretical and pedagogical issues in selecting and using media. In the second part, insightful empirical research findings are presented on the contributions of different forms of media in language teaching and learning, including their effect on learners' learning motivation. The third and concluding part of the book provides in-depth accounts of how media can be harnessed to drive innovative curricular practice as well as students' evaluations of these curricular projects.

Reservoir engineering is a branch of petroleum engineering that applies scientific principles to the drainage problems arising during the development and production of oil and gas reservoirs so as to obtain a high economic recovery. The working tools of the reservoir engineer are subsurface geology, applied mathematics, and the basic laws of physics and chemistry governing the behaviour of liquid and vapour phases of crude oil, natural gas, and water in reservoir rock. Of particular interest to reservoir engineers is generating accurate reserves estimates for use in financial reporting to the SEC and other regulatory bodies. Other job responsibilities include numerical reservoir modelling, production forecasting, well testing, well drilling and workover planning, economic modelling, and PVT analysis of reservoir fluids.

"This collection of essays brings together some of the finest pieces Hitchens published over the last two decades for the first time in one book, addressing with characteristic wit and erudition the subjects he is best known for, including: the case against God, faith and religious observance; the case for intervention in Iraq; indictments of towering political figures like Bill and Hillary Clinton, Tony Blair, and Henry Kissinger; and celebrations of the writers and thinkers whose work meant most to him"--

What happened at 10 Rillington Place was so shocking and gruesome that even today everyone over a certain age still remembers the case with a shudder. In 1950, Timothy Evans was hanged for the violent murder of his baby daughter; he was also assumed to have murdered his wife. Then, less than three years later, another tenant, John Christie, was found to have killed at least six women, hiding their bodies in the garden, under floorboards and in a concealed kitchen alcove. Christie followed Evans to the gallows. It seemed unlikely that two murderers were living at 10 Rillington Place, and the evidence that emerged in the Christie case eventually led to Evans receiving a pardon. But there was also circumstantial evidence that Evans had indeed killed his wife and child. Crime student Edna Gammon firmly believes that Evans was guilty. In A House To Remember, she explains why.

Covering all of the main topics, including panel data, that are expected in the first econometrics course, Understanding Econometrics uses a new, understandable approach that explains theory intuitively in English, not through a series of mathematical derivations. Recognizing that most students will not be doing economics graduate work, but that they may well need to understand econometrics and how to apply it, this new text focuses on the connection between theory and practice. The text uses a simplified notation system and examples that are integrated with the explanations of the material, fostering comprehension so that the instructor can focus more readily on theory and applications.
