The impact factor of a journal is calculated by dividing the number of current year citations to the source items published in that journal during the previous two years. It is denoted as a ratio between citations and recent citable items published. You can either refer to the Journal Citation Reports (JCR) or the Scopus® database to find the impact factor of the journal.

The Journal Impact of an  
academic journal is a  
scientometric Metric that reflects  
the yearly average number of  
citations that recent articles  
published in a given journal  
received. It is frequently used as  
a Metric for the relative  
importance of a journal within its  
field; journals with higher Journal  
Impact are often deemed to be
