HP = (Torque x RPM) / 5250. You can measure torque and RPM and you have to calculate the Horsepower (HP) from them and not vice versa. A typical engine performance curve is shown below:

Fig.1: Engine
Performance
Torque Curve.

Read Online Marine Diesel Engine Curve

When the torque trails off as rpm increases at the top end. One may consider that engines making torque at a lower rpm tend to work better in marine applications due to the fact that “most” boats tend to plane in the range of 2,000 – 3,000 rpm.
