Socket extension. Php comes with a socket extension which provide c-style socket functions and can be used to write socket programs. However the socket extension is not the only option to do socket programming in php. Another technique is to use streams, like file streams. First lets take a look at how the socket extension code looks like.

Socket Programming Socket programming involves connecting to remote machines on LAN or over the internet using ip addresses and port number. For example google.com has an ip "173.194.36.3" and runs http server on port 80. So a socket application can connect to that ip address on that particular port number and start data communication ...

1. Create a socket. The socket function can be used to create a socket. In the following code example we shall create a tcp socket.

```
#!/usr/bin/perl -w use Socket; # For constants like AF_INET and SOCK_STREAM $proto = getprotobyname ('tcp'); #get the tcp protocol # 1. create a socket handle

Note that `socket_bind()` must be called before `socket_connect()` or `socket_listen()`. Listen for connections. After binding a socket to a port the next thing we need to do is listen for connections. For this we need to put the socket in listening mode. Function `socket_listen()` is used to put the socket in listening mode. Just add the following ...

In this Python 3 tutorial video, we cover the socket module. The socket module is a part of the standard library, so no installation is required. Sockets are an integral part for networking, but often confusing. I am by no means an expert on sockets, but I can at least share the knowledge I have on them.
