The macrolides are a class of natural products that consist of a large macrocyclic lactone ring to which one or more

# Access Free V 25 Macrolides

deoxy sugars, usually  
cladinose and  
desosamine, may be  
attached. The lactone  
rings are usually 14-,  
15-, or 16-membered.  
Macrolides belong to  
the polyketide class of  
natural products. Some  
macrolides have  
antibiotic or antifungal  
activity and are used as  
pharmaceutical drugs.

Macrolide - Wikipedia

Although UV

absorption is the most  
commonly used

detection system (Horie  
et al., 1998; Juhel-

Gaugain et al., 1999;

Leal et al., 2001), some

macrolides lack a

suitable chromophore

group, and, therefore,

electrochemical

detectors (Kees et al.,

# Access Free V 25 Macrolides

1998) or fluorescence-based systems (Leroy et al., 1994) via pre-column derivatisation have been developed.

## Macrolide Antibiotics - MUSC

The apparent volume of distribution ( $V_d$ ) for clarithromycin following oral administration of a single 250- or 500-mg dose to healthy subjects is 226-266 liters [56].

This enables clarithromycin to concentrate at the site of infection, where its in vivo efficacy is

# Access Free V 25 Macrolides

Macrolide resistance may be intrinsic or plasmid-mediated and constitutive or inducible; it may develop rapidly (erythromycin) or slowly (tylosin) and generally results in cross-resistance between macrolides. Efflux from cells is a second important mechanism of resistance for some members of this class, as
